

CBRE EMEA Technical – deep dive

What the technical division does, what it is currently pointed at, the reporting it already sells, where instructBrain fits, and where CBRE actually publishes templates.

CIRCULATION

Internal - not for external release

In two lines. CBRE EMEA Technical is the arm that **inspects buildings, prices their condition and liabilities, and monitors other people’s developments** - then hands it over as reports. In the UK and Ireland it sits inside *Design & Build → Project & Programme Management*, alongside Technical Due Diligence, Dilapidations, Development Monitoring, Engineering and Façade Consultancy, Buildings & Systems and Cost Advisory.

It is **not** the facilities-management business. FM is GWS - a separate, far larger machine (UK Local alone: 7,000+ staff, 850+ contracts, \$2bn). Technical is the advice FM and the transaction teams lean on. **That distinction is the one to hold in the room.**

01 What the division actually does

Each of these is a service CBRE publicly sells, with the deliverable it produces and who pays for it.

SERVICE	WHAT IT PRODUCES	WHO IT IS FOR
Technical Due Diligence	Risk identification, quantified liabilities, condition and quality assessment of structures, façades and engineering installations, measured against energy legislation and the sustainability agenda	Buyers, sellers, and cross-border or multi-site portfolio transactions
Dilapidations	Schedules of condition, dilapidations provision reports, terminal and interim claims, IFRS 16 lease-accounting advice, S18 valuations, expert-witness advocacy	Landlords and occupiers, at lease start, during the term, and at exit
Development Monitoring	Stage-by-stage scrutiny of a development the client does not control, through to completion	Funders, investors, JV partners, superior landlords, occupiers. £4bn+ of development overseen, projects from ~£1m to over £500m
Buildings & Systems	Building fabric, structure and engineering systems: due diligence, compliance and certification, commissioning and engineering design in one team	Owners and occupiers optimising performance and operational efficiency
Engineering & Façade Consultancy	Design, control and performance strategies; fault diagnostics and remediation strategies for façades of every type	Developers, owners, and remedial-works programmes
Project & Programme Management	Feasibility, budgets, risk transfer, on-site oversight, occupation and beyond	Occupiers, investors, developers across every major sector
Geomatics (within TDD)	3D modelling, accurate measurement data, BIM-ready floor plans, digital twins	Transactions and asset records

Sources: cbre.co.uk - [Technical Due Diligence](#) · [Dilapidations](#) · [Development Monitoring](#) · [Buildings & Systems](#). Read 9 Oct 2026.

The sentence worth remembering from their own page. “A single point of contact is our critical link in delivering consistency and quality **across the UK and Europe**.” Note the scope - UK and Europe, not global. Any pitch that assumes a global problem is answering a question they did not ask.

02 What they are currently pointed at

CBRE does not publish divisional financial targets, so this is the published record on the forces moving this division's workload - which is the useful thing to know anyway.

SIGNAL	READING
UK capital values fell 0.9% in Q3 2026 SOURCE	Rents up 0.5%, total returns 0.5% - a repricing market. Falling values drive transactions, and transactions drive due diligence, condition surveys and dilapidations work. CBRE UK Monthly Index, press release 8 Oct 2026 .
Europe: record investment in healthcare assets SOURCE	"Ageing demographic across Europe fuels record investment in healthcare assets" - CBRE, 7 Oct 2026 . Care and health assets are condition-heavy, compliance-heavy property. New money into the sector means new survey work.
European data centres growing ~20% in 2026 SOURCE	CBRE research put Europe's data-centre market reaching ~13GW of capacity by end-2026. These are engineering-services assets where commissioning, condition and compliance records decide value.
Net Zero pathway SOURCE	CBRE publishes a Climate Transition Strategy with four pathways. Their TDD page already says they measure installations "against energy legislation and the sustainability agenda" - so the evidence behind that measurement is already being gathered, asset by asset.
Scale of the surrounding business SOURCE	GWS UK Local: 7,000+ employees, 850+ contracts, \$2bn (Kevin Lynn, President UK Local, CBRE Supplier Partner Event 2026). Development Monitoring oversees £4bn+ .
They buy through a partnership programme SOURCE	CBRE Supplier Partner Event 2026 (24 Sep, Old Billingsgate) - "the UK's largest and most influential event of its kind" - plus a preferred-supplier programme, mySupplier/mySuite onboarding, and a Supplier Code of Conduct. This is the door, and it is a procurement door, not a technical one.
Divisional financial targets, named client mandates NOT PUBLISHED	Nothing sourceable. Do not quote a target number for EMEA Technical in the room - it does not exist in public. If a number is needed, ask for it.

03 The reporting they do that we could do

This is the commercial heart of it. Every row below is a document CBRE already sells and bills for, and the instructBrain capability that produces the same artefact from photographs.

THEIR DOCUMENT	WHAT IT MUST CONTAIN	WHAT WE ALREADY DO
Schedule of condition (lease start / exit)	Element-by-element condition, dated photographic evidence, fair-wear-and-tear position, defensible at negotiation	Condition survey + Property inventory : rooms, three overview photographs each, item table, meters and keys, handover block
Dilapidations provision report	Liability quantified per item, lease clause it engages, evidence good enough to defend or claim	Condition findings with per-item severity, action and trade, on photographs carrying their own time, place and capture details
Technical due diligence - condition sections	Structures, façades, engineering installations; quality, condition, and performance against legislation	Condition + Weatherproofing report types, with a citation ceiling of 12 Approved Documents, 6 British/EN standards and 6 HSE instruments - nothing off-list is ever cited
Development monitoring reports (monthly)	Progress, quality, compliance and risk, site visit by site visit, with a trail	Site walk + Snagging + the weekly compliance register : six checks (fire, excavation, scaffold, welfare, lifting and plant, housekeeping), six-week history, and a failure raises an action with a named owner and a due date
Mobilisation / handover packs	Asset records handed to the incoming team, per discipline	Property inventory + Handover , and per-trade extracts on tokenised links - a subcontractor opens only their own section and never sees the full report
Cross-border portfolio evidence	One consistent standard across countries and languages	Server-side report translation across 30 languages , with English kept as the record copy

Compared against the report types verified in the instructBrain repository and the capability dossier IB-CAP-001 (9 Oct 2026).

Two design rules that matter more in this account than in any other. instructBrain routes to **Not assessed** rather than guessing a pass - and where the evidence does not support a judgement, a finding must be resolved by a person before the report can be issued. For a due-diligence or dilapidations practice, that is not a feature, it is **the reason the document is worth anything in a negotiation**. Lead with it here.

04 Their templates online - what actually exists

Dal's question was whether their templates are published. The honest answer is: **the supplier templates are, the client report templates are not.**

WHAT IS PUBLIC	WHERE, AND WHAT IT IS
Supplier letterhead template (UK & Ireland)	Hosted on CBRE's media asset domain, from the mySupplier training portal. A Word-style letterhead for suppliers writing to CBRE. FOUND
Business letter template	Same domain, under Supplier Shield → requirements. An example of the information required on an authorised-signatory banking-details letter. FOUND
mySupplier training guides	Supplier onboarding walkthroughs - how to register, how to invoice, how to comply. FOUND
Supplier sample documents	CBRE publishes a sample-documents page through its supplier enrolment portal. FOUND
Client-facing report templates (TDD, schedule of condition, dilapidations)	Not published, and there is no leak to find. Those documents follow the RICS professional standards and CBRE's internal practice groups. Their site confirms the governance: CBRE runs a UK & Ireland Technical Due Diligence Best Practice Group covering process, procedure, governance and quality. DOES NOT EXIST PUBLICLY

What this means for us. Do not hunt for a CBRE template to copy - it is not out there, and implying we have one would be a credibility risk. The published authority is RICS, and the rules there matter: technical due diligence is a global RICS professional standard; dilapidations is **England & Wales only** and must not be described as global; **"Building surveys and technical due diligence of commercial property" was archived on 5 Dec 2022** and must not be cited as current; and **there is no standalone RICS Schedules of Condition standard**. Our four sample reports already sit in the right shape - schedule of condition, electrical installation, finding and remedial schedule, manual photographic record.

05 Where the fit is, and what will be probed

The fit, in their language

- **"A single point of contact... consistency across the UK and Europe."** Their stated quality mechanism is consistency, and consistency at scale is exactly what template-driven, standards-bounded capture gives you. This is the strongest opening line in the account.
- **"Leaving no open issues and no questions unanswered."** Their TDD page's own promise. Our Not-assessed gate and per-item actions with named owners are how that promise is enforced rather than asserted.
- **Development monitoring is a monthly report treadmill.** Every monitored scheme generates a visit report, month after month, across a £4bn book. That is the highest-volume report type in the division and the easiest to put through a photo-to-report engine.
- **Mobilisation and handover.** The property inventory engine - rooms, item tables, meters and keys - is facilities-management mobilisation work that CBRE already bills for. It is the least obvious feature on our site and the most relevant one here.
- **Cross-border portfolios.** Thirty languages with English as the record copy answers an EMEA portfolio problem directly.

The four things they will probe

PROBE	POSITION, HONESTLY
"Is this an Ellis capability, or a supplier product?"	CBRE already runs Ellis AI in-house - publicly described as its AI platform - plus agent work with Google and McKinsey. This question decides the whole shape of the deal and must be answered before architecture is discussed. Ask it first, do not assume the answer.
Security & enterprise readiness	SSO/SAML: not present. SOC 2 / ISO 27001: no evidence. Data residency: UK/EU choice not documented. CAFM/IWMS connectors: none. Say so plainly and scope it as work. Note the market context: no UK condition-survey tool publishes SSO at all, and nobody in the class offers on-prem or customer-selectable residency - so this is a category gap, not just ours.
Supplier Code of Conduct	It requires audit rights (desktop, on-site, records review), data-protection compliance, breach notification regardless of the supplier's own assessment, and records that are created and maintained, never altered or omitted. Our audit-log table and frozen issued versions line up with the last of those. The first three are process, not product.
Brand	CBRE's Standards of Business Conduct prohibit using their name or logo in public promotion without written exemption. Anything client-facing needs that permission in writing first.

06 Questions to ask

- 1 Is the technical reporting problem here an **Ellis AI** problem or a supplier opportunity? Who decides?
- 2 How many monitoring visits and condition surveys does EMEA Technical produce in a year, and what is one worth to produce?
- 3 Which is the bigger pain: the **cost** of producing a report, the **time** it takes, or the **consistency** of the output between surveyors and countries?
- 4 Who owns the template set today, and how does a change to it get released across the region?
- 5 What would a novice surveyor need on site to produce a document a director would sign without editing?
- 6 On security: is SSO required at proposal stage, or scoped as an implementation condition?

07 What a good outcome is

Good: one named report type, agreed as a paid pilot, produced through instructBrain and compared side by side with the current output. Development monitoring or a schedule of condition is the natural first one - high volume, well understood, and low brand risk.

To avoid: being drawn into an architecture conversation before the Ellis question is answered; promising SSO, certifications or residency; and describing dilapidations as a global product line. All three are cheap to avoid and expensive to recover from.

- cbre.com - supplier registration (mySupplier / mySuite onboarding)
- RICS professional standards, as verified 3 Oct 2026: TDD global standard; dilapidations England & Wales only; the commercial building survey/TDD standard archived 5 Dec 2022; no standalone Schedules of Condition standard.

Unverified in this document. Russ Forsdick is listed publicly as **EMEA Technical Director** at CBRE (LinkedIn, The Official Board) - **his precise remit is unconfirmed**, and the title also appears as a client-account role in CBRE's own job adverts (for example a Nike account). Titles in this business denote an account or a discipline, so confirm which before quoting it. Simon Brown (Senior Director, National Operations) hosted the 2026 supplier event. Aaron Reid sits on the CBRE UK & Ireland Technical Due Diligence Best Practice Group (LinkedIn). No divisional financial target for EMEA Technical is published anywhere.
