instructBrain

The record of what you saw.

From a photograph on site to an issued, citation-backed report — and every reference in it checked against a list that refuses to be invented.

THE PROBLEM

The paperwork happens twice.

- Photographs get taken on site — and then **re-filed from the camera roll at nine at night**.
- Findings get written up **from memory**, hours after the walk, in a Word template.
- References get typed by hand. Page numbers get typed by hand.
- A regulation gets quoted from memory — and it may be the wrong one.
- Then it goes by email, and **the version in somebody's inbox is the version**.

WHAT IT IS

One walk. One record. Nothing typed twice.

Capture
Photographs filed against the element as they are taken

Draft
The photograph becomes a finding, in plain words

Confirm
A person approves, corrects or bins every one

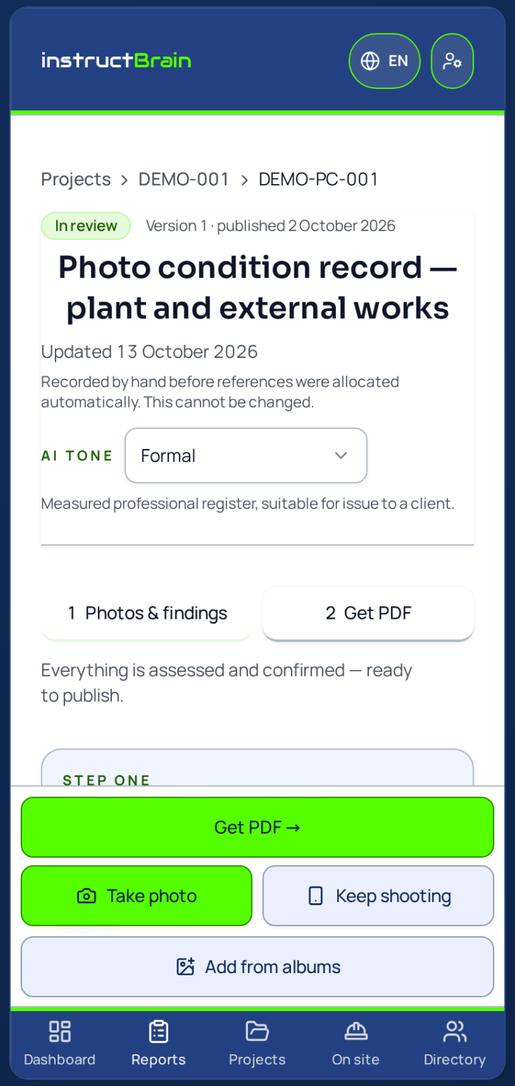

Issue
Numbered, paginated, frozen as published

Distribute
To the project's recipients — never by itself

Keep
Every issued version, exactly as it went out

STEP ONE

It starts where you are standing.

Open the cockpit from a QR code. It installs to the home screen and opens full-screen, because it is going to be used in one hand, in the rain, wearing gloves.

Each photograph is filed against the **element, room or location** it belongs to as it is taken. Those location values stamp onto the photograph and become the location the report prints.

Nothing is renamed, re-sorted or emailed to yourself afterwards.

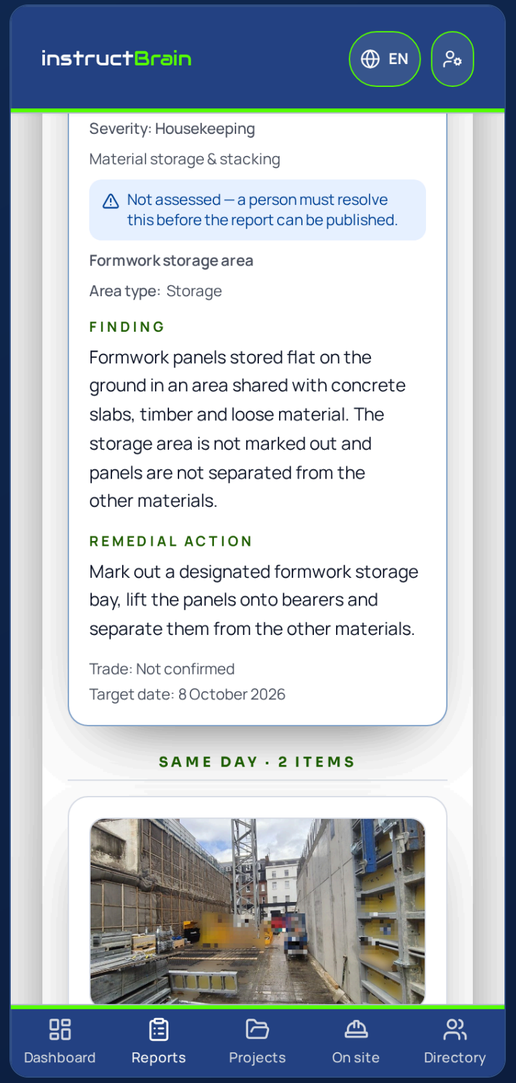

STEP TWO

The photograph becomes the writing.

For each photograph, the product drafts a finding: what is there, what it means, what to do about it, and the probable cause where the image actually supports one.

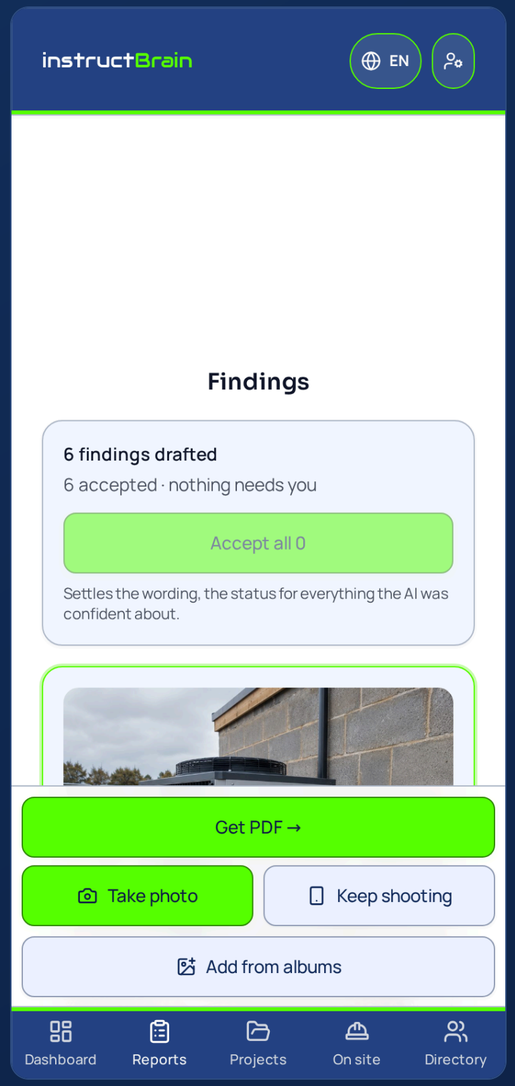

It sets the severity and suggests the trade responsible. It does **not** decide either.

Everything it writes is a draft, and it is labelled as one.

THE GATE

Nothing issues that a person has not confirmed.

This is the difference between a tool and a liability. The machine writes; **a person decides**.

Every item is confirmed, corrected or deleted by somebody with a name. The report will not publish while anything is still unassessed or unconfirmed — it is a hard gate, not a warning banner.

And where the evidence does not support a judgement, the item is marked **not assessed** and has to be resolved by a person.

THE RULE THAT MATTERS MOST

It may only cite what is on the list.

12

Approved Documents

A, B, C, E, F, G, H, J, K, L, M, P — structure, fire, sound, ventilation, sanitation, drainage, combustion, falling, energy, access, electrical.

6

British and EN standards

BS 7671 · BS 8000 · BS 7593 · BS EN 12599 · BS EN 14336 · BS EN 378-1

6

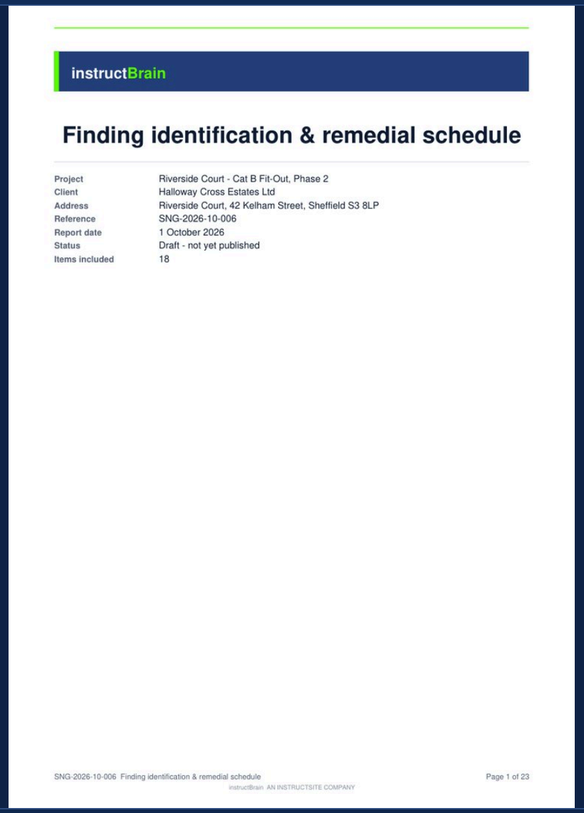

HSE and statutory

ACOP L8 · HSG274 · HSG85 · HSR25 · Electricity at Work Regs 1989 · Water Fittings Regs 1999

It selects **the single most relevant reference, from the list and nowhere else** — and where nothing on the list applies, **it cites nothing at all**. No invented clauses. No guessed paragraph numbers.

THE OUTPUT

A document you can put in front of anyone.

Finding identification & remedial schedule

Project	Riverside Court - Cat B Fit-Out, Phase 2
Client	Halloway Cross Estates Ltd
Address	Riverside Court, 42 Kelham Street, Sheffield S3 8LP
Reference	SNG-2026-10-006
Report date	1 October 2026
Status	Draft - not yet published
Items included	18

SNG-2026-10-006 Finding identification & remedial schedule Page 1 of 23

Cover: project, client, address, reference, date, status, item count.

Item 10

Status: Graded - condition assessed

Reception floor finished with large-format polished stone-effect tiles laid to a grid, with a reflective surface. The tiles are visible across the foreground and toward the entrance; the surface appears clean and intact, with no visible cracking, lippage, staining or open joints within the area the photograph supports. Reflections from the ceiling lights and glazing are present, which is inherent to the polished finish. A strip of blue protective tape is present on the floor adjacent to the internal corner of the reception desk; this appears to be a temporary protective measure and is not recorded as a defect.

Required action

No action required to the floor finish. Remove the temporary protective tape once the adjacent work is complete and clean the floor in accordance with the finish manufacturer's recommendations.

Pin 1 of 5 - photograph 2

A crop of the area this item refers to.

Item 11

Status: Graded - condition assessed

A white reception desk is present to the centre right of the frame, of solid panel construction with a plain front and a matt finish, set on a recessed grey plinth. The desk panels are visible and appear flat and square, with no visible impact damage, joint separation or staining. A plant and a dark object rest on the desk top; both are loose items, not defects. No person is present behind the desk.

Required action

No action required. Maintain the finish under a routine cleaning regime and inspect the plinth and panel joints periodically for movement.

Items: numbered, graded, with the action required, the photograph, and a pin marking the area.

THE RECORD

What was issued stays issued.

Publishing locks the report. Reopening it does not quietly change what went out — it starts a **new version**.

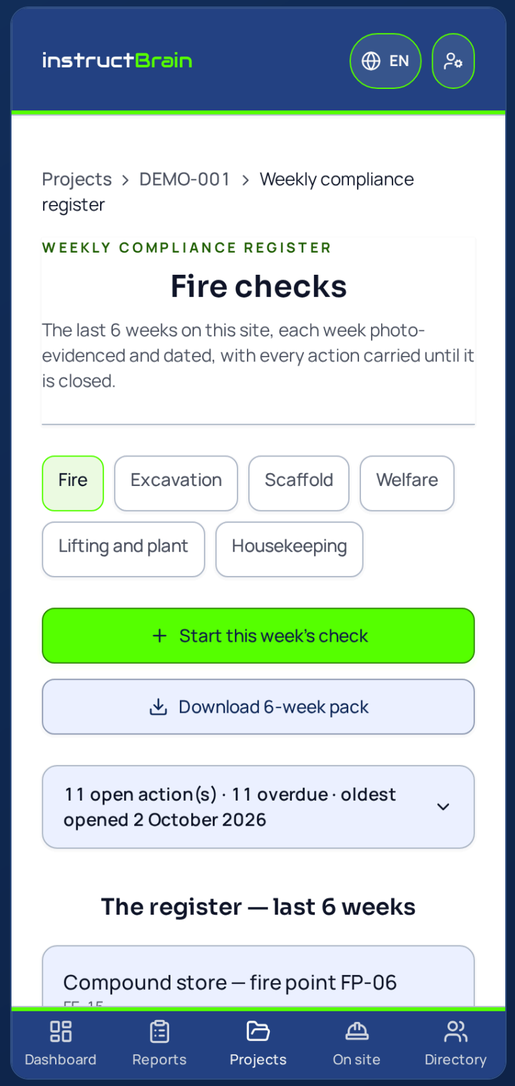

The issued version is kept exactly as it was issued, with its number and its date. If somebody asks in three years what the report said, you can produce it, byte for byte.

Report references are allocated by the database, so two reports cannot claim the same one.

COMPLIANCE

The register is built, not typed.

A project carries a **weekly compliance register** alongside its reports: the checks that were carried out, week by week, against a fixed window of weeks.

It is built from the same evidence as the reports, as the checks are recorded — not reconstructed into a spreadsheet the week before an audit.

That is the screen an auditor asks for, and it is already there when they ask.

THE BREADTH

Twelve templates. Thirty languages. One habit.

12

Templates, in five families

Schedule of Condition · site condition · property inventory · electrical installation · mechanical & HVAC · fit-out & finishes · damp & water ingress · weatherproofing · findings & remedial schedule · photo condition record · manual photographic report · certificate register.

30

Languages

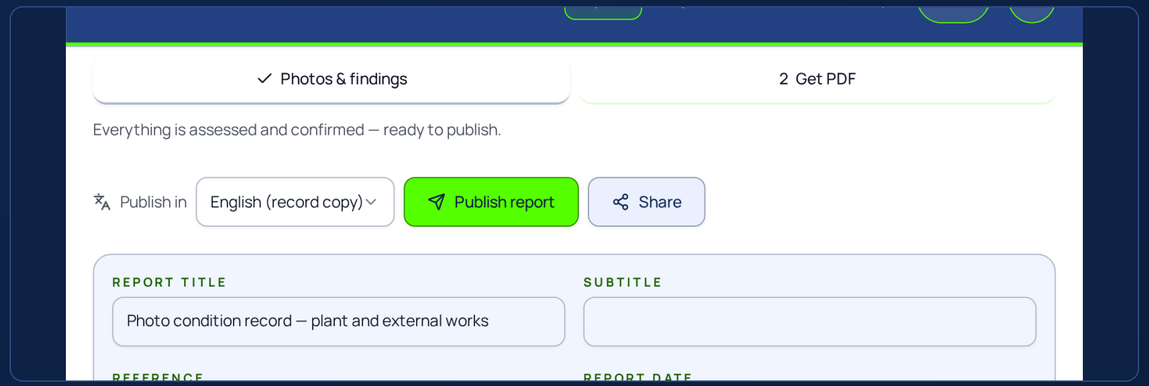

Including right-to-left for Arabic and Hebrew, with English always kept as the record copy.

And around it

The trade and recipient directory, distribution to the people who need it, per-trade share links, organisation branding on the document, and a field cockpit that lives on a phone.

Property inventory — every room, and its items

Report language — English kept as the record copy

WHAT IT DOES NOT DO

The limits, stated out loud.

- It is **not a drawing or modelling tool**. No CAD, no BIM, no estimating.
- The machine drafts language; it **does not decide engineering**. Severity, trade and sign-off are a person's.
- It will **not invent a citation** — so some findings cite nothing, deliberately.
- It **sends nothing by itself**. Distribution is an action somebody takes.

Everything it does, in one document: scan this, or read it later.
