instructBrain

The demo run sheet

Card per slide. Card 6 is slide 6. If you are lost, look at the clock and read the card with that number.

IB-DEMO-001 · Rev 1 · 14 October 2026
Companion to IB-PRES-001 (12 slides, five minutes). Sign in as **Demonstration account** before they arrive.
Every figure here was read from the product — twelve templates, thirty languages, and the reports listed in the demo index are real rows in that account.

Before they walk in — two minutes

1. Sign in at **instructbrain.com** as the **Demonstration account**. Check the header says *Demonstration account* — if it says anything else you are in the wrong organisation and the demo data is not there.
2. Open three tabs, in this order: **Reports** (the list), **SW-2026-10-001** (Site condition 11 – 13 Bruton Street), and the register from **Projects**.
3. Open SW-2026-10-001 on its **second tab — "2 Get PDF"**. That is where Publish and Share live. Nine demos out of ten go wrong here: they are not on the first tab.
4. Have one printed report page in your hand. A paper report in the air beats any slide.

The whole thing on one screen

1	Title — *“what happens to a photograph after you take it”*. No screen.
2	The problem — six versions in six inboxes. No screen.
3	The six-step flow — capture, draft, confirm, issue, distribute, keep. Slide only.
4	Capture — phone in hand, or the cockpit screen. **show**
5	Draft — a finding with its drafted text and severity. **show** SW-2026-10-001, one item
6	The gate — unconfirmed items, and the line the app shows. **show**
7	The citation rule — 12 + 6 + 6, and nothing outside the list. **show** a cited item
8	The output — the printed page, cover and items. **show** the PDF
9	Frozen — versions list. **show**
10	The register — week by week, already built. **show**
11	Breadth — twelve templates, thirty languages. Slide only.
12	The limits, and “thank you”. Slide only. Stop talking.

The cards

1 Title

0:00–0:15

SHOW Nothing. Stand still, no notes in your hand. This line buys you the room.

SAY *“Morning. Five minutes, and I’ll spend most of it on one thing: what happens to a photograph after you take it.”*

2 The problem — 0:15–0:50

SHOW Slide only. No screen.

SAY The re-file at nine at night, the write-up from memory, the typed references, the regulation quoted from memory — then *"six versions, and the one in somebody's inbox is the version."*

CAREFUL Slow right down on "six versions". That is the line the room nods at. Don't rush into the next slide.

3 What it is — the six steps — 0:50–1:15

SHOW Slide 3, and tap each box as you say it: capture, draft, confirm, issue, distribute, keep.

SAY Same walk, paper moved to where the information already is. **A person confirms every one** — say that part slowly, it is the whole pitch.

4 Capture — starts where you are standing — 1:15–1:45

SHOW Your phone, on the **On site** screen — or slide 4 if you are not holding it. If the app is open on the laptop: *On site* → the project picker → *Start site walk*.

SAY Opens from a QR code, installs to the home screen, used one-handed in the rain with gloves. **Filed against the element, room or location as you take it.** Nothing renamed or emailed to yourself afterwards.

IF ASKED *"Does it work with no signal?"* — Yes, keep shooting. Uploads catch up when you have signal again.

5 Draft — the photograph becomes the writing — 1:45–2:10

SHOW SW-2026-10-001 → tab **1 Photos & findings** → open one item. Point at the drafted finding text, the severity and the suggested trade.

SAY It drafts what's there, what it means, what to do, and the likely cause *when the picture supports one*. It sets a severity and suggests a trade. *"And everything it writes is marked as a draft, because that's what it is."*

CAREFUL Do not call it "the AI decides". Say "it drafts; a person decides". They will quote you back.

6 The gate — nothing issues unconfirmed

2:10–2:45

SHOW The confirm controls on the findings list — and if you have a draft open, the line the app itself shows: *"Not ready to publish yet: N still not assessed, N with no responsible trade, N not confirmed by a person."*

SAY Every item is confirmed, corrected or deleted **by somebody with a name**. It will not publish while anything is unassessed — a hard gate, not a warning banner. Where the evidence doesn't support a judgement it says *not assessed* and a person has to resolve it.

CAREFUL This is the slide to slow down for. Two beats longer than feels natural. Never drop this one, whatever the clock says.

IF ASKED *"What if the AI is wrong?"* — It can't publish anything by itself. A wrong line is caught by the person confirming it, and that is the point of the gate.

7 The citation rule

2:45–3:20

SHOW An item in SW-2026-10-001 that carries a reference — point at the regulation line.

SAY **It may only cite what is on the list.** Twelve Approved Documents, six British and EN standards, six HSE and statutory instruments. It picks the single most relevant, from that list and nowhere else — and *"if nothing on the list fits, it cites nothing at all."*

CAREFUL Pause before "no invented clauses" and let the room be quiet. This is the sentence the whole product rests on.

8 The output

3:20–3:45

SHOW The printed page in your hand. On screen: SW-2026-10-001, tab **2 Get PDF** → *Open the report PDF*. Cover first: project, client, address, reference, date, status, item count.

SAY Then item by item — numbered, graded, the action required, **the photograph it was written from**, and a pin marking the area. Whatever the job runs to.

IF ASKED *"How many pages?"* — Say what you're holding. Real reports run 20 to 40-plus pages, and more pages is the price of never splitting an item across a page break.

9 Frozen — what was issued stays issued

3:45–4:05

SHOW The report's published version, and the line on its cover: **"Published as version 1 on ‹date›"**. Point at that, and at the version list beside it.

SAY Publishing locks it. Change something later and it starts a **new version** — the issued one stays exactly as it went out, with its number and its date. *"If somebody asks in three years what that report said, that's what it said."*

IF ASKED *"So which version does my client have?"* — The one you sent them. A share link hands back the version it was made against, so a reissue never moves the copy in their inbox. Making them a new version means sending a fresh link, deliberately.

10 Compliance — built, not typed

4:05–4:25

SHOW **Projects** → the project → its **compliance register**. In the demo account the weekly registers are there (fire, housekeeping, scaffold, welfare, excavation, lifting).

SAY Week by week, the checks that were done, built from the same evidence as the reports — not reconstructed into a spreadsheet the week before an audit. *"It's the screen an auditor asks for, and it's already there when they ask."*

CAREFUL The register is a list of weeks and checks — not a chart that draws itself. Do not promise a graph.

11 Breadth

4:25–4:45

SHOW Slide 11 — or, better, the template chooser on screen: **Start a report** → the chooser, five families, twelve templates.

SAY **Twelve templates in five families** — condition, snagging and handover, site and safety, M&E, and records and registers. **Thirty languages**, including Arabic and Hebrew right to left, with English always kept as the record copy. Plus the trade and recipient directory, distribution, per-trade links, your own branding on the document.

CAREFUL **Your slide says "eleven report types". The app now shows twelve templates in five families** — the twelfth is the certificate register. If somebody is counting, say twelve templates, or say "eleven report types plus the certificate register". Don't get caught on your own number.

CAREFUL It is a list. Keep it moving — don't let the breadth slide become the speech.

12 The limits, and the close

4:45–5:00

SHOW Slide 12. Then stop.

SAY Not a drawing tool — no CAD, no BIM, no estimating. It doesn't decide engineering: severity, trade and sign-off are a person's. It won't invent a citation. And **it sends nothing by itself** — distribution is an action somebody takes.

CAREFUL Land "thank you" and stop. Do not add a sentence after it. The limits are why they trust the rest.

If you get cut to three minutes

Drop cards 9 and 11. Cut card 5 to one line: *"the photograph becomes the writing, and everything it writes is a draft."* **Never drop card 6 or card 7** — the gate and the citation rule are the two things nobody else in the room can say.

Questions you will get

They ask	You say
Is it just ChatGPT writing my reports?	No. It drafts, and a person confirms every item before anything can be published. The gate is hard: unassessed or unconfirmed, it will not issue.
How do I know it isn't making the regulation up?	It can only cite from a fixed list — twelve Approved Documents, six standards, six HSE and statutory. Outside that list it cites nothing at all. That is the rule the product is built on.
What if the AI gets something wrong?	It cannot publish by itself. The person confirming is the control, and the item is confirmed by name.
Can somebody edit it after it's gone out?	No. What was issued stays issued, byte for byte. A change is a new version, and you decide whether the client gets it.
How many report types?	**Twelve templates in five families** — condition, snagging, site and safety, M&E, records and registers. Thirty languages.

Does it work offline / on site?	It's built for a phone in one hand, in the rain. Photographs keep uploading as you go, and catch up when you have signal.
What about the client's own branding?	Your organisation branding goes on the document. The report is yours.
Will it send to subcontractors for me?	It prepares each trade's own extract with their own items only, and it does not send anything by itself — somebody presses send.
How much does it cost?	Do not invent a figure. Say you will send the commercial detail, and move on.
Does it do drawings, CAD, take-off, estimating?	No, and it isn't trying to. It replaces the paperwork after the walk, not the drawing office.

If it goes wrong, in front of people

They are all recoverable. Stay calm, and say the honest line.

The Share menu "isn't there". You are on the first tab. It lives on *2 Get PDF*. Say "let me get to the document view" and carry on.

"Create link" is greyed out. That report is not published yet — the app will not make a client link to a draft. Publish it first, or switch to SW-2026-10-001 which is published. Say: "it won't link a draft, by design."

A link opens a web page instead of the PDF. That is the one fix still waiting on your publish. Say: "the link hands over the finished document" and show the PDF from *Open the report PDF* instead. Rehearse the link demo after you publish.

Publish is refused. Something is unassessed or unconfirmed. Read the line out loud — it names what is missing — and turn it into a feature: "this is the gate."

Something is slow or refuses to load. Say "give it a moment, it's a live system", then talk to slide 3 while it catches up. Never tap a control twice in front of an audience.

Demo data — what is in the account, and what to open

Read from the Demonstration account on 14 October 2026. These are real reports; open one by name so you never hunt mid-demo.

Reference	What it is	Use it for
SW-2026-10-001	Site condition 11 – 13 Bruton Street · 10 items · 9 photographs · published	**Your main demo report.** Draft text, a citation, the published PDF, a share link.
DEMO-INV-001	Property inventory and schedule of condition · 12 items · 25 photographs · published	Volume and page count. The “how long does a report run to” question.
DEMO-SN-001	Snag identification and remedial schedule · 10 items · published	A snagging list, with trades and deadlines.
DEMO-EL-001	Electrical installation condition · 8 items · published	Grading against BS 7671.
DEMO-MS-001	Mechanical and HVAC installation · 8 items · published	Plant, commissioning risks.
DEMO-DM-001 / WP-002 / FQ-001	Damp · weatherproofing · fit-out quality · published	Breadth if someone wants a second example.
DEMO-MP-001	Manual photographic record · 6 items · published	Photographs you label yourself, issued as a PDF only.
Weekly registers	Fire, lifting and plant, welfare, scaffold, excavation, housekeeping · draft	Card 10. They are **drafts** — show the register as the record of checks, do not try to publish one live.

Three things not to do

Don’t publish live in the demo unless you mean to — it is a real record with your name on it, and a published version cannot be unpublished.

Don’t promise that sending works end to end. Emailing extracts has not yet been used on a live job. If someone asks, say it is built and being proved on the first job — that is the honest answer and it costs you nothing.

Don’t show a draft and call it finished. The register drafts and *DEMO-PC-001* (reopened, so not currently published) are the two places a sharp question could land.

Three lines that must land

1. **“Nothing issues that a person has not confirmed.”**
2. **“It may only cite what is on the list — and where nothing fits, it cites nothing at all.”**
3. **“What was issued stays issued.”**

If you remember nothing else off this sheet, those three are the meeting.

IB-DEMO-001 · Rev 1 · 14 October 2026 · Companion to IB-PRES-001 (12 slides, five minutes).
Report references, item counts and states read from the Demonstration account on 14 October 2026. Figures quoted from the deck: 12 Approved Documents, 6 standards, 6 HSE/statutory. Verified from the product on 14 October 2026: twelve templates in five families, thirty languages.
